Girovap is an industrial multifunction cleaning machine:

Steam floor washer and dryer- **NEW**-
Sweeper
Polisher
Wet and dry vacuum cleaner
Steam cleaner

The steam floor washer and dryer is one of the “Plus” offered since it allows to deep clean by steam and instantly dry the surfaces in one single step.

The steam brings to the traditional floor washer multiple advantages:

- The steam impact directly on the surface at 100°C providing a strong degrease action that combined with the mechanical action of the motorized brush head it grants a superior cleaning results compared to any traditional washer with injection solutions.
- Hot-dry steam has a powerful cleaning capacity with only a minimum water consumption and consequently the drying process through a powerful wet and dry vacuum floor squeegee is practically instantaneous.
- With this system it is possible to save water and drastically reduce detergents consumption. Normally the more detergent used the more water consumption is required to rinse even though chemical residuals still remain on the surface as water itself is not able to get rid of them 100%. This is particularly sensitive issue in all places where surfaces should be chem-free. Girovap is able to deep clean without any chemicals though detergent injection is still available function.
- The steam cleaner unit can be used also separately and independently from the main machine. It can be used as canister type cleaner with its own wheels and pulled by the steam hose, but also as backpack thanks to the professional harness provided with the machine. This feature is very convenient since it will be possible to do steam cleaning applications even in the most hard to reach places and without the need to carry over mops, cloths, buckets all can be done with one equipment. The steam cleaner is provided with a standard kit of steam accessories that can be used for multiple steam cleaning jobs.
- Also the the wet and dry vacuum system can work also as stand alone unit, with its own recovery dirty tank of 25 liters it is possible to vacuum large amount of liquids when necessary. The machine is also provided of a wet and dry vacuum kit that allows to do multiple vacuum cleaning jobs.

Technical data	Girovap
Power source:	230V-50Hz
Max power absorption	3200 Watts
Yield steam floor wash and dry with steam	950 m2/hr
Yield floro wash and dry with water and detergent	1000 m2/hr
Yield sweeper	1100 m2/hr
Steam Cleaning brush head width	350 mm
Drying/squeegee width	730 mm
Brush motor power	600 Watts
Number of brushes	2
Brush motor RPM	1000 R.P.M.
Vacuum motor power	600 Watts
Depression	1600 mm.H ² O
Steam cleaner power	2000 Watts
Boiler capacity	1,5 liter
Water refilling tank capacity for the boiler	1,8 liter
Water consumption (steam)	3 liter/ora
Detergent tank capacity	1,8 liter
Max steam pressure	5 bar
Recovery dirty tank capacity	25 liter
Detergent solution tank capacity	13 liter
Total machine weight	65 Kgs
Machine overall dimensions	710x1058x970h mm
